## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7, 9-14 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hoffelner (U.S. Patent 5,026,252) in view of Hoffelner (U.S. Patent 5,688,105 or GB 2 304 158)..

Hoffelner discloses a brush seal with a bristle arrangement (2) having a retention section (not shown, but inherent since the bristles are retained in a specific configuration). There are a pair of plates (8, 9), each having a surface which abuts, contacts and flanks the bristle arrangement (Figure 1, for example). There is a channel (Figure 1, for example) to frictionally engage the retention section. The channel extends to ends of the plates. Movement of the retention section is prevented after the plates are secured together and movement would inherently be allowed prior to securing the plates together. While the specifics of the retention section are not shown, as the invention is directed elsewhere, Hoffelner does teach, in the '105 and '158 patents, a retention section configured in the manner claimed. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the retention section of the '105 and '158 patents with the '252 patent in order to securely retain the bristle arrangement.

Art Unit: 3671

Claim 24 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hoffelner, as applied above, and further in view of Wolfe et al. (U.S. Patent 6,250,640).

Hoffelner is silent regarding the configuration of the retention section; however, Wolfe et al. teaches using a weld joint to secure the bristles together. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the weld joint of Wolfe et al. in the retention section of Hoffelner in order to securely retain the bristles.

### ***Response to Arguments***

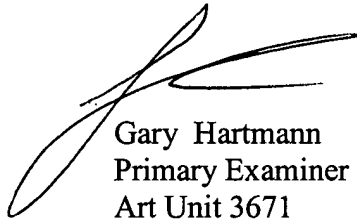

Applicant's arguments filed May 2, 2005 have been considered but are moot in view of the new grounds of rejection.
